Professional Summary

Full-Stack Developer and Computer Science graduate with hands-on experience supporting internal public-sector systems, developing Go and TypeScript REST APIs, and building responsive database applications with Angular, Python, PostgreSQL, and MongoDB. Combines backend API design, workflow implementation, frontend integration, technical documentation, structured problem solving, and collaborative delivery to help teams build maintainable digital products. Motivated to contribute this backend depth and frontend breadth in a Full-Stack Developer position while continuing to develop within a collaborative engineering team.

Core Skills

Go & Backend Development: Developed and refined Go endpoints for internal workflow, scheduling, document, and administrative data modules using layered backend structures.

REST API Design & Documentation: Built CRUD and workflow-oriented APIs with list and detail retrieval, filtering, sorting, pagination, validation, versioned routes, and OpenAPI, Swagger, or Postman documentation.

Authentication, Authorization & Workflow: Implemented JWT authentication, role-based access control, controlled workflow transitions, secure request validation, and multipart file handling.

Node.js, Express & TypeScript: Built a blog API using an MVC architecture with Express, TypeScript, Sequelize, and PostgreSQL with validation, logging, email notifications, and API documentation.

Python, Flask & Django: Developed Flask and Django applications with REST endpoints, authentication, scheduled task logic, web scraping, database CRUD, and data export.

Databases & Data Operations: Worked with PostgreSQL, MySQL, MongoDB, Sequelize, and PyMongo across relational queries, document storage, migrations, seeding, filtering, sorting, and pagination.

Angular & Frontend Development: Built responsive Angular interfaces with TypeScript, SCSS, Tailwind CSS, standalone and reusable components, bilingual content, forms, themes, and API integrations.

Testing, Version Control & Delivery: Used Karma/Jasmine, Playwright, Git, and GitHub across automated testing, source control, deployment workflows, static prerendering, and GitHub Pages delivery.

Collaboration & Technical Documentation: Led a team capstone, translated functional requirements into implementation, documented APIs and role-based workflows, and adapted output to organisational requirements.

Professional Experience

BKN RI

Nov 2025–May 2026

Programmer Intern - Digital Systems & Applications | East Jakarta, Indonesia

Supported backend development, application workflows, and technical documentation for internal public-sector systems across workflow, scheduling, document, and administrative data domains while protecting confidential implementation details.

- Developed and refined Go backend endpoints for list and detail retrieval, filtering, sorting, pagination, and administrative workflow processing.
- Implemented role-based access control, workflow transitions, multipart file handling, request validation, and OpenAPI and Swagger documentation aligned with implemented routes.
- Prepared structured user-guide documentation for role-based management service workflows and translated functional requirements into implementation detail.

LearningX

Aug 2023–Dec 2023

Certified Independent Study (MSIB) - Full-Stack Web Development | Remote

Completed a four-month project-based programme covering frontend delivery, Flask backend services, MongoDB, web scraping, CRUD workflows, deployment, and collaborative software delivery.

- Built practice applications using HTML, CSS, JavaScript, Python, Flask, MongoDB, AJAX, and PyMongo, including authentication, scraping, and database workflows.
- Led the Patient Management System capstone by coordinating scope, task allocation, weekly progress reporting, implementation, and final delivery.

Selected Projects

Portfolio Website

2025–Present

Frontend Developer - Personal Project / Angular 20, TypeScript, SCSS, Tailwind CSS

Built a responsive bilingual portfolio for presenting professional experience, technical capability, selected projects, and project case studies.

- Developed standalone components, typed data modules, reusable UI, custom directives, theme controls, responsive layouts, and an EmailJS contact form.
- Added static prerendering, SEO metadata, accessibility support, Karma/Jasmine unit tests, Playwright end-to-end tests, and GitHub Pages deployment.

Blog API Server

Nov 2023

Backend Developer - M-Knows Consulting Bootcamp / Node.js, Express, TypeScript, Sequelize, PostgreSQL

Built a structured REST API for a blog platform with maintainable server-side organisation and developer documentation.

- Developed versioned REST endpoints using an MVC architecture with Sequelize and PostgreSQL.
- Implemented JWT authentication, authorization, validation, error handling, logging, email notifications, and Postman and Swagger documentation.

Patient Management System

Nov 2023–Dec 2023

Full-Stack Web Developer and Team Lead - LearningX / Flask, MongoDB, HTML, CSS, JavaScript, AJAX

Developed a healthcare web application for patient registration, queue handling, scheduling, medical records, and administrative workflows.

- Built Flask and MongoDB features for registration, profiles, queues, schedules, medical records, and role-specific administration.
- Implemented authentication, CSV export, interface updates without full-page refresh, API documentation, and deployment workflows.

Task Master

Jul 2023–Aug 2023

Full-Stack Web Developer - CS50 / Django, Django REST Framework, PostgreSQL, JWT

Created a task management application for recurring daily, weekly, and monthly workflows with secure user access and structured data handling.

- Developed validated CRUD APIs with JWT authentication, Swagger documentation, filtering, sorting, search, and interactive data tables.
- Implemented task history, timezone-based scheduled resets, and Excel export using OpenPyXL.

Education

Universitas Negeri Jakarta

Sep 2020–Feb 2025

Bachelor of Computer Science (S.Kom.) - Computer Science

GPA: 3.62/4.00

Thesis: Utilizing Latent Dirichlet Allocation and Long Short-Term Memory in Analyzing Sentiments and Topics on Social Media Regarding State University of Jakarta

Research summary: Sentiment and topic analysis of 174,618 Twitter/X posts about Universitas Negeri Jakarta using Indonesian text preprocessing, FastText, Latent Dirichlet Allocation, Long Short-Term Memory, and model evaluation.

Languages

Indonesian — Native

Native speaker with professional fluency for collaboration, technical discussion, documentation, and stakeholder communication.

English — Professional Working Proficiency

Uses English for technical documentation, developer-facing writing, English language tools and frameworks, and software development collaboration.
